

## Guidelines for Raising Levees with no Adverse Impact Considerations

**Status:**

In Progress

**IWR Contact:**

Rolf Olsen ([J.Rolf.Olsen@usace.army.mil](mailto:J.Rolf.Olsen@usace.army.mil))

**Purpose:**

The study will consider Corps of Engineers' policies and how they could support "no adverse impact" standards where local sponsors are considering raising levees. Increasing the heights of levees can cause adverse impacts such as increasing flood stages and changing the magnitude of peak flood flows along other locations of a river.
